	Name-Mikil· Calwani D158/37
. I day	Advance Do D 101
	Advance Der Ope lab
	Experiment 10.
	Aim-
-	To perform port, service monitoring and linux
	To perform port service monitoring and linux server monitoring ving Nagios.
	Theory-
	Nagiae is an open source monitoring system.
	Nogios core-
	This is treely available open-source monitoring software
	To It prowas. Core contains a wide garage
	infrashouse monitoring through allowing plug-ing to
	extend its monitoring capabilities. It is base for paid Nagios monitoring system.
	J = 1,7571 (3 1/3 1/3 1/3 1/3 1/3 1/3 1/3 1/3 1/3 1/
	Magio, core has an optional web-interface, which displaye network status notifications, log files and more. Core can notify users when there are host or
	displaye network status, notifications, log files and more
	server issues.
	Nagios 71 is an extended version of Nagios Core, intended as an serventerprise level version of monitoring tool. XI is added atop core with additional peatures and is soit to use
	intended as an serventerprice level reasion of monitoring
	tool. XI is added atop core with additional peatures
(Sundaram)	and is paya to use. FOR EDUCATIONAL USE

	Conclusion-
	Thus we learned service monitoring and successfully monitored linux server using Nagios and NRPE.
